

Sprint PCS Wireless WebSM Connection

What You Need to Connect

We offer three different products for our Sprint PCS Wireless Web Connection solutions. Two products – the Sprint PCS Wireless Web Connection Kit and the Sprint PCS Wireless WebSM Connection Card Kit – let you connect by using your wireless Internet-ready Sprint PCS Phone. Another product – the Sprint PCS Wireless Web Modem – lets you use it as a wireless modem to connect your mobile computing device to the Internet or your intranet without using a Sprint PCS Phone.

Sprint PCS Wireless Web Connection Kit

This convenient connectivity kit connects to the serial port and contains Sprint PCS DialerSM software, a serial data cable and a cable adapter to connect your Sprint PCS Phone to your mobile computing device. Designed for Apple[®] Macintosh[®] portables, PC laptops and Windows[®] CE devices.

Sprint PCS Wireless Web Connection Card Kit

This multi-device kit enables socket and/or PC card slot connection – simplifying the connection and expanding the number of available peripherals by freeing up the serial port for fax or printer use. This kit contains Sprint PCS Dialer software, a serial data cable and a cable adapter to connect your Sprint PCS Phone to your mobile computing device. The kit contains all the components necessary to connect laptops, Windows CE devices and Macintosh portables.

Sprint PCS Wireless Web Modem

This card provides wireless connections without the need of a Sprint PCS Phone. The card enables you to send and receive e-mail, access the Internet and access corporate networks wirelessly. This kit contains Watcher[™] software by Sierra Wireless and is designed for mobile devices with PCMCIA slots, laptop PC computers and other devices using Windows 95, 98, 2000 and Windows NT.[®]

Get Connected

The Sprint PCS Wireless Web provides new levels of connectivity, equipping mobile workers with timely, relevant information – virtually anywhere they happen to be on the Sprint PCS Nationwide Network. It enhances on-the-road efficiency, allowing workers to turn hotels, taxis and airports into highly functional mobile offices. And with the largest all-digital, all-PCS nationwide network, which serves more than 300 major metropolitan areas and most major airports, Sprint PCS helps your company extend your business into the mobile environment.

Sprint PCS Wireless Web Connection

In the office, your employees rely on their phones and computers to access information that's vital to their jobs. But since today's business "office" is often a taxicab, hotel room or airport, it's critical that you provide your workers with access to these tools wherever business takes them. Sprint PCS Wireless Web Connection enables your mobile workforce to access the same powerful functionality that's available in the office—virtually anywhere on our nationwide network.

All that's required is a wireless Internet-ready Sprint PCS Phone™ and a Sprint PCS Wireless Web™ Connection Kit or a Sprint PCS Wireless Web™ Modem and an existing mobile computing device. Whether employees are connecting to your company's network or the Internet, Sprint PCS Wireless Web Connection will provide access to productivity-enhancing information virtually anywhere on our network. We offer three different types of access, depending on the needs of your mobile workforce.

Connecting to Your Company's Network

With Sprint PCS Wireless Web Connection, we offer two different solutions that are ideal for accessing your company's network.

Connection

Your employees can connect to the information they need no matter where they are on our network. With a wireless Internet-ready Sprint PCS Phone and a Sprint PCS Wireless Web Connection Kit or a Sprint PCS Wireless Web Modem, our connection provides an easy way to link to your company's network. With access speeds of 14.4 Kbps, this reliable circuit-switched connection is appropriate for checking e-mail and accessing other low-bandwidth corporate software applications. While you can access the Internet with this product, the Enhanced Internet Connection provides faster connections at no additional charge.

Private Network Connection

We recognize that your company may have a need for faster throughput for specific business applications or you may want to utilize your existing security protocols. Sprint PCS will partner with you to create a Private Network Connection solution tailored to the needs of your business and designed to help you extend your network into the mobile environment.

We will work with you to determine which applications are most important to your mobile workforce, and we'll identify your data network configuration and security requirements. We'll partner with you to develop the solution that will enable you to wirelessly extend your Virtual Private Network (VPN), Frame Relay Network or other network structure into the mobile environment.

The Private Network Connection typically requires an investment in hardware and software that's installed behind your company's firewall. This investment can generate substantial productivity gains. For your mobile workforce, all that's required is either a wireless Internet-ready Sprint PCS Phone and Sprint PCS Wireless Web Connection Kit or a Sprint PCS Wireless Web Modem.

Key Benefits Include:

- **Connecting Networks.** We'll enable you to take your existing network and extend it to the Sprint PCS Nationwide Network.
- **Quick Connections.** We can supply your company with a custom solution that uses Internet routers to connect your network to the Sprint PCS Nationwide Network in approximately 10 seconds. So your employees can count on quick, reliable access whenever they need it.
- **Bandwidth Optimization.** Your company can invest in server hardware and software behind your company's firewall that will increase throughput rates to wireline-like speeds. The return on investment is quickly realized when your mobile workforce can access their own data network and the essential tools they need.

- **Reliable Security.** We will take your existing security blueprint and extend it to the wireless environment. So whether it's a wireline or wireless connection, your company's information is always secure.

- **Easy Connections.** Remotely accessing the company network is easy. The only hardware and software your employees need is either a wireless Internet-ready Sprint PCS Phone and a Sprint PCS Wireless Web Connection Kit or a Sprint PCS Wireless Web Modem.

- **Single Access Code Nationwide.** There's no more searching for local Internet Service Provider (ISP) numbers or using 800 numbers. Employees simply dial # "your company's symbol" for quick online access, wherever they are on the Sprint PCS Nationwide Network.

- **No Landline Charges.** Completely bypasses the public telephone network, avoiding toll and 800-number charges.

Connecting to the Internet

Enhanced Internet Connection

With Enhanced Internet Connection, your employees can quickly and reliably connect to the Internet to get the information they need from virtually anywhere on the Sprint PCS Nationwide Network. Enhanced Internet Connection works with your existing network and provides wireline-like speeds. Connecting in approximately 10 seconds, your employees can get access to key information between meetings, hotels and plane flights. Using either their wireless Internet-ready Sprint PCS Phone and a Sprint PCS Wireless Web Connection Kit or a Sprint PCS Wireless Web Modem, your employees will have everything they need to access the Internet.

Key Benefits Include:

- **Direct Internet Access.** Completely bypasses the public telephone network, providing direct Internet access. So there are no calling cards, area codes or dial-up numbers required, which saves your company money in toll- and 800-number charges.

- **Quick Connections.** Connections can be established in approximately 10 seconds. This means your employees can quickly initiate a session, access the information they need and log off.

- **Faster Throughput.** Utilizing bandwidth optimization technology, throughput ranges increase from 14.4 Kbps to wireline-like speeds in excess of 56 Kbps—especially for workers who regularly access the same web site.

- **Single Access Code Nationwide.** There's no more searching for local ISP numbers or dealing with 800 numbers or calling cards. Users simply click on "Connect" for quick online access wherever they are on the Sprint PCS Nationwide Network.
